
DSO440 Clean Up Small Quantities of Stock

Overview

This program helps to clean up the returns area for small quantities of unwanted stock that is to be written off. A rule table determines which items can be included in the hierarchy to define stock to be written off. Stock is selected by warehouse and its zone, adjustment code and item hierarchy. Once approved, picking slip is produced to pick the stock and pulp it. A certain order category must be defined for this kind of write off transaction so that it can point to a certain device type.

Examples

This section illustrates examples concerning:

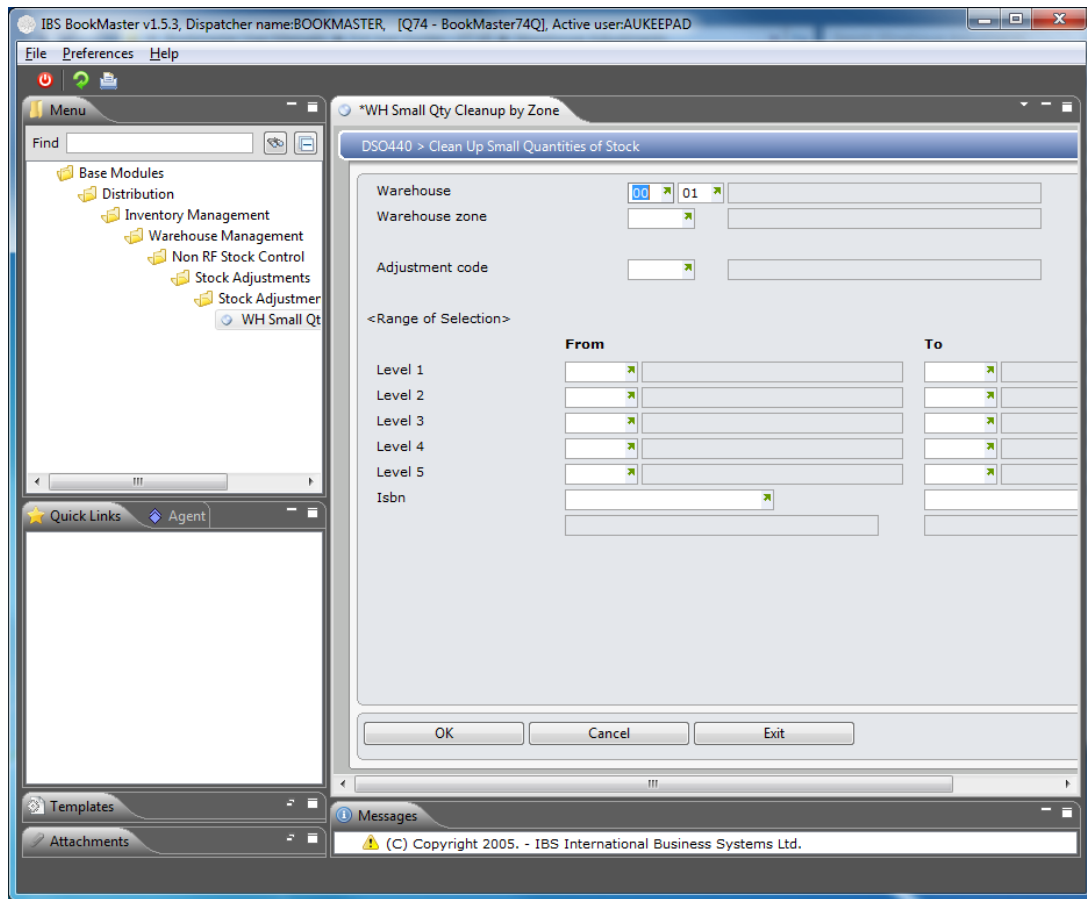

[Example 1: To Write Off Unwanted Stock](#)

Example 1: To Write Off Unwanted Stock

This example describes how to write off small quantities of unwanted stock from returns area.
