
WHM095 Item Location Extension Maintenance

<i>Overview</i>	The Item extension facility is used to allow picking of titles flagged with an extension following predefined rules. New item extension format files and item extension formatting maintenance programs are used to determine appropriate item extension validation (for example, prices or REM) and the logic to match stock to orders.
<i>Purpose</i>	This panel allows you to: <ul style="list-style-type: none">Add a new item location extensionMaintain existing item location extensionDelete existing item location extension

Examples

This section illustrates examples concerning:

[Example 1: Addition of a new item location extension.](#)

[Example 2: Maintenance of an existing item location extension.](#)

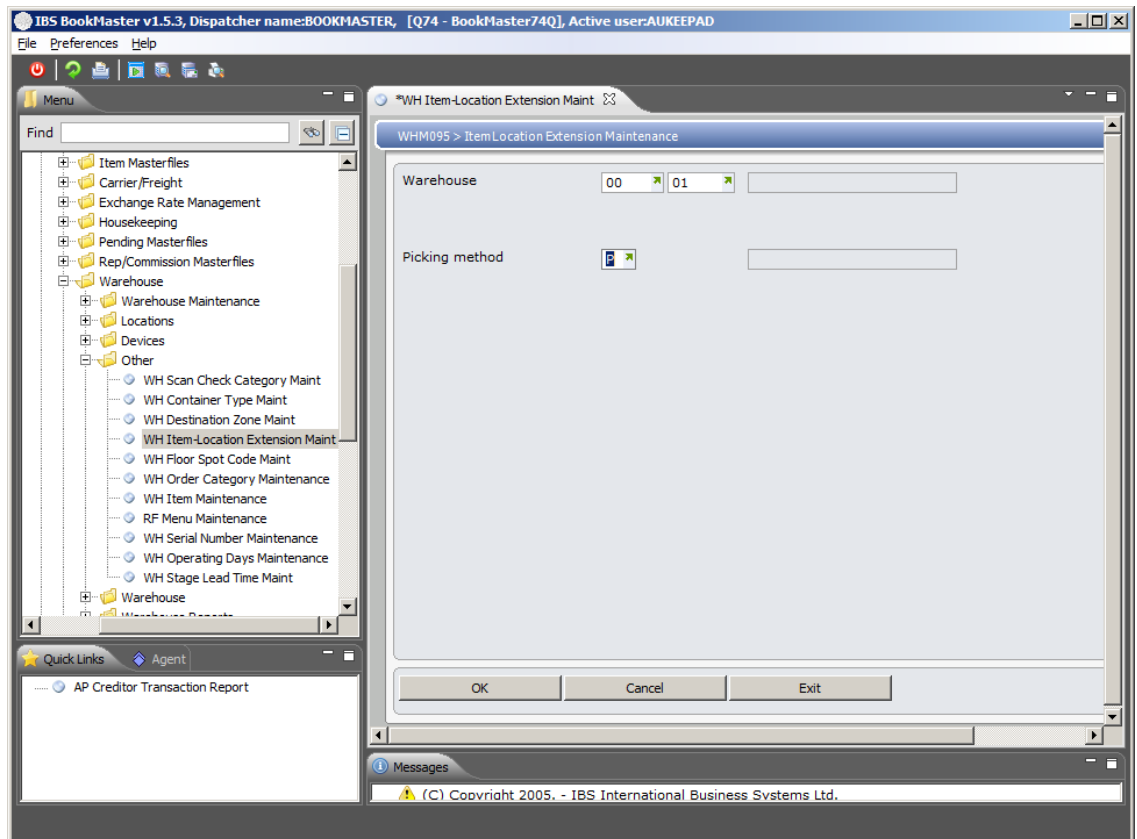

[Example 3: Deletion of an existing item location extension.](#)
