DSO090 DSOS - Fwd Order Release Sel. by Date

Forward orders and Standing order are stored until a cut-off date comes into effect. The release can be generated manually via this option, causing the system to scan all forward orders and releasing those that qualify according to the setup in the Control File. Normal order validation and credit checking takes place prior to conversion into invoices or picking slips.

This program determines whether the orders are to be released based on the release date being greater than or equal to today's date minus days as per **TMSDS/WH-TAT** and the preferred delivery date not equal to 999999. If flagged as Yes, the above will happen; if No, the order will be released regardless of the conditions mentioned previously.

This process runs directly from the menu with no further selection criteria.
