
DSO156 Order History Sequence Generation

Overview

This process checks in the Item Masterfile for a valid record. It determines if record is valid against selection criteria and writes a sequenced record. The sort key is filled with data as per table from **TMSDS/OH-STRK**. It contains the definition for the search facility to be used.

Examples

This section illustrates examples concerning:

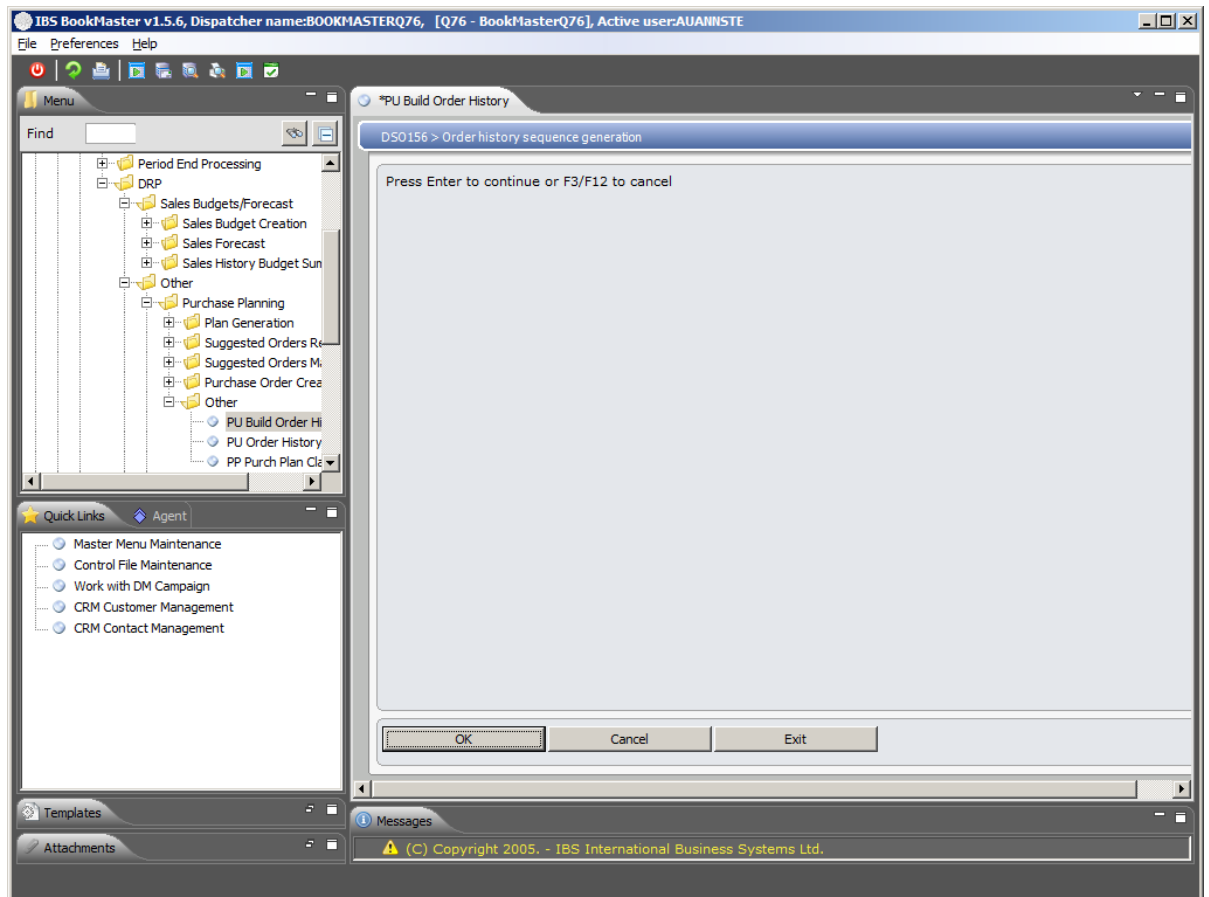

[Example 1: To Generate Order History Sequence](#)

Example 1: To Generate Order History Sequence

This example describes how to generate order history sequence.

1. Select option **PU Build Order History** from Base Modules> Distribution> Inventory Management> Purchasing> Purchase Planning> Other menu.
