
DSO345 Out of Production Release

Overview

This program is used to generate the Out of Print Release/Update routine.

As the Out of Print module is linked to the Title Masterfile, some fields on the Title Masterfile can be updated by the claim process. For example cease date, ISBN status, B/O flag, stock report and stock status.

However if there are different regions selling the same product at different stages then business rules can be setup so those products will not be 'closed' or 'stopped' until all the regions have these products at status "out of production", i.e. item status on Title Masterfile will not be updated.

Depending on the instructions on the Out of Print file, outstanding customer and/or purchase orders may be cancelled and remaining stock may be written off.

Examples

This section illustrates examples concerning:

[Example 1: Generating an Out of Production Release](#)

[Example 2: Sample report](#)

Example 1: Generate an Out of Production Release

This example describes how to generate an Out Of Production Release.

1. Select option **OP Release/Update Out of Prodctn** from Base Modules> Distribution. Masterfiles> Out of Production Management> Out of Production (Print) menu.

DSO345 Out of production release main panel is displayed.

IBS BookMaster v1.5.3, Dispatcher name:BOOKMASTER, [Q74 - BookMaster74Q], Active user:AUKEEPAD

Relevant Fields

Company

The company for which the release is being run.

Item status

Input to this field is only allowed if control file TMSDS/OP-IBOR is not active; i.e. it does not have a stock status to trigger out of production.

If TMSDS/OP-IBOR is active then the item status update to Title Masterfile will only occur if all the customer groups have stock status "out of production". Therefore when an item is out of production in one region but still being sold in another region it can't be closed or stopped.

If TMSDS/OP-IBOR is not active then an optional Item status can be entered which will update the Title Masterfile with this value for ALL titles **linked** to the claim reference, otherwise the specific value for the field by title as entered on the claim detail lines will be used to update the Title Masterfile.

Stock report

This optional user defined Stock Report code relates to the reason there is insufficient stock, like out of print. Enter the stock report to update the Title Masterfile or leave blank for no change.

If this field is not blank, the field in the Title Masterfile will be updated with these values for ALL titles linked to the claim reference otherwise the specific value for the field by title as

entered on the claim detail lines will be used to update the Title Masterfile.

Stock Report Codes are established in TMSDS/IM-STKR. TMSDS/IM-STKRR is setup to indicate to the system what the Stock Report code should change to when stock is received as well as whether or not the Release Date should change. TMSDS/IM-STKRD is setup with the default Stock Report code. TMSDS/IM-STK-RV is used to determine whether or not validation on Stock Report **codes** is necessary. TMSDS/IM-IBORR is also used to define backorder logic

Stock status

A stock status identifying why a particular title has been marked as out of print etc is optional. The Item status, Stock status, Backorder flag and Stock report fields in the Title Masterfile can be updated with these values when the claim is updated.

If the field is not blank, the field in the Title Masterfile will be updated with these values for ALL titles linked to the claim reference otherwise the specific value for the field by title as entered on the claim detail lines will be used to update the Title Masterfile.

Warehouse adjustment code

Where stock is automatically adjusted out, entry of the warehouse adjustment code (write off code) is mandatory. This is the reason a title is being returned/claimed, for example the book is damaged.

Special Instructions

Special instructions are optional and can be any free form text to include regarding the claim.

Authorization number

This number is given by the Publisher/Supplier as authorization to accept the return. The publisher's/supplier's RA number is only required for physical returns. TMSDS/SUP-AUTH indicates whether entry of an authorization number is mandatory. This authorization number then displays in DSO345 Release/Update Publisher Claims where the number is needed to validate and update the Title Masterfile.

Comment

Any relevant comments made by the Publisher/Supplier or internal management about this claim can be entered for informational purposes on inquiry screens. This comment then displays in DSO345 Release/Update Publisher **Claims**.

2. Click **OK** to complete the process.

Example 2: Sample report

This example shows the sample report for auto stock write off. Following report is printed.
